ABSTRACT OF THE DISCLOSURE

        Using a print response process block for
generating a print job, a spool process block for
spooling the print job and generating a print
5   completion job, a transferring data convert process
block for converting the print completion job into a
format in which the print completion job can be
transferred to a remote printer, a remote transfer
process block for transferring the print completion
10   job according to a predetermined transfer protocol,
and an encipher block for enciphering the print
completion job, a print process for performing remote
printing is temporarily completed in a local network
to suppress a delay in communications when remote
15   printing is performed, a disconnection of a connected
circuit, and a data leak during the remote transfer.
